

TicketDesk Administrator Guide

TicketDesk v4.2 — Internal Product Manual (Clearwave Technologies)

Document ID	PM-TD-042	Version	4.2
Effective Date	February 15, 2025	Owner	Product & Support Engineering

1. Overview

TicketDesk is a cloud-based customer support and ticketing platform used by Clearwave's internal support teams to manage customer inquiries, incidents, and service requests. This guide covers administrator-level configuration for TicketDesk version 4.2.

2. System Requirements

- Supported browsers: Chrome 100+, Microsoft Edge 100+, Safari 15+, Firefox 100+.
- Business plan: up to 500 concurrent agent seats.
- Enterprise plan: up to 2,000 concurrent agent seats and dedicated infrastructure.
- Minimum recommended network bandwidth: 5 Mbps per active agent session.

3. Account Roles and Permissions

Role	Manage Billing	Manage Users	Edit SLA Rules	View Reports
Owner	Yes	Yes	Yes	Yes
Admin	No	Yes	Yes	Yes
Agent	No	No	No	Limited (own tickets)
Viewer	No	No	No	Yes

4. Setting Up Your Workspace

- Verify your organization's domain under Settings → Domains before inviting agents.
- Single sign-on (SSO) is supported via SAML 2.0; configure the identity provider under Settings → Security → SSO.
- Custom ticket fields (up to 40 per workspace) can be created under Settings → Fields.

5. Ticket Routing and SLA Rules

Tickets are auto-assigned using round-robin or load-based rules configured under Automations → Routing. SLA breach warnings are triggered automatically once 80% of the allotted SLA time has elapsed, notifying the assigned agent and their manager.

6. Integrations

- Slack: two-way ticket notifications and reply-from-Slack support.
- Email-to-ticket: inbound emails to support@yourdomain.com auto-create tickets.
- Zapier: connect TicketDesk to 3,000+ third-party apps without custom code.
- REST API: rate-limited to 100 requests per minute per API key; returns HTTP 429 when exceeded.

7. Troubleshooting Common Issues

Error Code	Meaning	Resolution
TD-401	Authentication failed	Regenerate the API key under Settings → API
TD-403	Insufficient permissions	Confirm the agent's role has the required access
TD-503	Rate limit exceeded	Reduce request frequency or request a limit increase
TD-522	Webhook delivery timeout	Verify the receiving endpoint responds within 10s

8. Data Export and Retention

Tickets can be exported as CSV or JSON under Reports → Export. Business plan tickets are retained for 2 years; Enterprise plan tickets are retained for 7 years to support compliance requirements.

9. Support

For further assistance, contact support@ticketdesk.io. Enterprise customers have access to a dedicated priority support line with a 1-hour response SLA.
